

University of California, Berkeley — B.A. Data Science, B.S. Microbial Biology (Dec 2024)
Relevant Coursework: Data Structures & Algorithms, Data Engineering, Machine Learning

EMPLOYMENT EXPERIENCE

Twist Bioscience - Software Engineering Fellow Dec 2025 - Jul 2026

- Built production backend **Python** APIs with **FastAPI** for DNA-product manufacturing workflows, collaborating with wet-lab operators to turn operational needs into software solutions.
- Developed an event-driven microservice on a **Kafka**-based distributed orchestration system to process QC failure events and execute complex manufacturing recovery logic.
- Reduced QC review service latency by 5× by batching sequential I/O-bound calls and executing them concurrently with **ThreadPoolExecutor**.
- Engineered a mock data upload tool for lower environments, accelerating software delivery by eliminating development dependencies on wet-lab teams for test data.

Mercor - AI Model Evaluator Aug 2025 - Nov 2025

- Collaborated with a leading tier-1 social media company to evaluate and analyze complex model responses for cutting-edge multimodal models. Improved performance and alignment by ensuring adherence to persona, safety, and performance constraints.
- Delivered structured qualitative and quantitative feedback, directly influencing iterative fine-tuning of high-impact AI systems.

Village Market - Operations Associate Intern Dec 2024 - Aug 2025

- Developed a Python script to parse structured data from PDF invoices, streamlining retail management workflows and saving significant time through automation.
- Drove revenue growth by attending industry conferences and introducing high-demand items to our product line.

PROJECTS

AI Patient Calling Portal | Python, FastAPI, PostgreSQL, React, WebSockets, Retell, OpenAI

- Built a full-stack operator portal for outbound AI phone calls, integrating Retell telephony with a custom LLM WebSocket agent and a React dashboard for initiating calls and monitoring live transcripts.
- Implemented real-time transcript streaming via WebSockets and an LLM-based emergency classifier that flags high-risk patient statements during active calls for operator review.

SKILLS & CERTIFICATIONS

Technical Skills: Python, PostgreSQL, FastAPI, Kafka, SQLAlchemy, REST APIs, GCP, Asyncio, Docker, Git, GitHub Actions, Pandas, Scikit-learn, Matplotlib

Certifications: Generative AI Fundamentals (Databricks), Graph Data Modeling (Neo4j)
