John Mudawar

San Francisco | (415) 602-7078 | johnnymudawar@gmail.com | linkedin

EDUCATION

University of California, Berkeley | Dec 2024
B.A. Data Science, B.S. Microbial Biology

EMPLOYMENT EXPERIENCE

BananaBread AI — Software Engineer Sep 2026 - Present

- Building AI and data infrastructure for product intelligence systems alongside the founding team.
- Translating ambiguous prospective customer conversations into product and technical specifications.

Twist Bioscience — Software Engineer Fellow Dec 2025 - Jul 2026

- Built production **Python/FastAPI** APIs for DNA manufacturing workflows, including an event-driven **Kafka** microservice that processed QC failures and orchestrated complex manufacturing recovery logic in collaboration with wet-lab operators.
- Reduced QC review service latency by 5× by using batching and concurrency.
- Engineered a QC data upload tool for lower environments, enabling engineers to reproduce and validate workflows independently of wet-lab teams and accelerating development and testing.

Mercor — AI Model Evaluator Aug 2025 - Nov 2025

- Evaluated complex AI model responses against defined persona, safety, and performance criteria, identifying failure patterns and areas for improvement.
- Provided structured qualitative and quantitative feedback to support iterative fine-tuning.

Village Market — Operations Associate Dec 2024 - Aug 2025

- Automated extraction of structured data from PDF invoices with Python, streamlining retail management workflows and reducing manual data entry.
- Used SQL to analyze revenue and units sold across product categories, identifying demand patterns and informing product assortment and purchasing decisions.

PROJECTS

AI Patient Calling Portal | Python, FastAPI, PostgreSQL, React, WebSockets, Retell, OpenAI

- Built a full-stack operator portal for outbound AI phone calls and monitoring live transcripts.
- Implemented real-time LLM-based safety classifier that flags high-risk patient statements

UC Berkeley Gym Occupancy Analytics | Python, GCP, GitHub Actions, Pandas, Plotly Dash

- Built an automated data ingestion pipeline that polls campus sensors to collect, validate, and persist analytics-ready gym occupancy metrics, robustly handling invalid readings.
- Developed an interactive dashboard to visualize occupancy data trends and surface insights

SKILLS & CERTIFICATIONS

Technical Skills: Python, SQL, PostgreSQL, JavaScript, FastAPI, Kafka, SQLAlchemy, REST APIs, MCP, GCP, Asyncio, Docker, Git, GitHub Actions, Numpy, Pandas, Scikit-learn, Matplotlib, Tableau
Certifications: Generative AI Fundamentals (Databricks), Graph Data Modeling (Neo4j)
